

**MITERED DRAIN™**  
INCORPORATED

### Features & Benefits

- Perfect for use in areas where lack of grade difference makes layout difficult.
- Can be used as an inlet or an outlet
- Water drains directly to the flow line of the pipe
- Choose cost effective, injection molded or thick, heavy duty machined grates according to your market needs.
- 18-8 stainless steel screws on the grate are removable for easy maintenance and cleaning
- HDPE grates are made with UV inhibitors
- All mitered drains come with a pipe attached for easy installation using a coupling adapter
- Adaptable to almost all types of pipe
- Minimizes standing water-critical in areas where mosquito abatement is of concern
- Maximizes use of bioswales and reduces runoff into storm drain systems-water stays on the surface longer for natural filtration of contaminants and stormwater absorption into the soil
- Much better than a pop-up or “bubble-up” system—no drywells to dig, no parts to freeze in winter, no stagnant water in the pipe
- Aids in designs requiring compliance with the Clean Water Act
